

CERTIFICATION

As a doctor and a scientist (previous study of electrical engineering) I have formed the following opinions with regard to the use of GEOPEX air ion therapy (inhalation machines based on the activation of highly therapeutic oxygen and nitrogen):

The medical systems have been in use for over 4 years for a broad range of applications. The systems of the Geopex Group are unique and lead the world in technology because they not only work with oxygen but also with ionized nitrogen.

We should pay special attention to nitrogen in ionized form since its therapeutic range of effectiveness stretches far beyond that of oxygen.

Since 1996, in collaboration with colleagues, I have been observing, documenting and evaluating the use of air ion-therapy for various diseases in over 500 patients. Its success and effectiveness is the result of the natural active principle of the air ions because they represent the basis of the biological system we call "life." Without these air ions our life would not be possible. On the basis of the highly therapeutic ion density of the Breathing Air Activation Systems (<5 million ions/cm³/sec), used whilst maintaining the natural air balance (21% O₂, 78% N₂), we were able to observe, in over 90% of all cases, acceleration in metabolism, improvement and regeneration of all the clinical pictures, increase in energy balance and improvement in well-being.

The main areas where usage is indicated:

- angina pectoris
- asthma
- CFS (chronic fatigue syndrome)
- circulation problems
- exhaustion
- heart attack
- hypoxia
- mucosa
- metabolic disorders
- ulcer of the leg
- and many more.
- allergies
- bronchitis
- skin diseases
- inflammation
- geriatrics
- liver diseases
- headaches
- stroke
- stress
- injuries/burns
- arthritis/arthrosis
- cholesterolaemia
- diabetes
- colds
- influenza infections
- hypo-hypertonia
- cancer (precautions & aftercare)
- treatment for pain
- tinnitus
- wound healing problems.

No side-effects or contra-indications have been demonstrated in the use of air ion therapy.

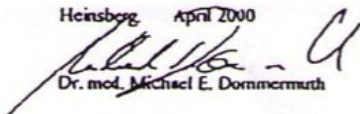

I would also like to stress the good anti-bacterial effectiveness of highly concentrated air ions that assist with wound healing through increased killing of bacteria and regulation of blood vessels. The same results were achieved overall with burns (e.g. due to sunburn) and sports injuries/injuries.

The inhalation systems are being applied by a large number of private users. They are also being used in doctors' practices, health resorts and aged persons' centres, private clinics, hotel health facilities and in the field of sport.

A great many references and reports are available, all of which document the successes of the therapy and the satisfaction of the users.

Recent studies also show the effectiveness of the air ions for chronic diseases in the case of patients who could not be helped with conventional or alternative therapies.
